The late James Stewart received his M.S. from Stanford University and his Ph.D. from the University of Toronto. He did research at the University of London and was influenced by the famous mathematician George Polya at Stanford University. Stewart was most recently Professor of Mathematics at McMaster University, and his research field was harmonic analysis. Stewart was the author of a bestselling calculus textbook series published by Cengage, including CALCULUS, CALCULUS: EARLY TRANSCENDENTALS, and CALCULUS: CONCEPTS AND CONTEXTS, as well as a series of precalculus texts. Troy Day received his M.S. in biology from the University of British Columbia and his Ph.D. in mathematics from Queen's University. His first academic position was at the University of Toronto, before being recruited back to Queen's University as a Canada Research Chair in Mathematical Biology. He is currently a Professor of Mathematics and Statistics and a Professor of Biology. His research group works in areas ranging from applied mathematics to experimental biology. Troy Day is also coauthor of the widely used book A BIOLOGIST'S GUIDE TO MATHEMATICAL MODELING, published by Princeton University Press in 2007.

I don't usually write product reviews, but I felt that it was necessary this time. This solutions manual

is labelled incorrectly. It is actually the manual for Biocalculus: Calculus for the Life Sciences, NOT Biocalculus: Calculus, Probability, and Statistics for the Life Sciences. While it is useful for the first 10 chapters, it does not contain chapters 11, 12 or 13 from Biocalculus: Calculus, Probability, and Statistics for the Life Sciences. Aside from the incorrect labeling I find this manual fairly helpful.

Its helpful, but it is missing the last 3 chapters of the book. Not exactly a complete manual.

as ad. thanks

fast ship and arrived as described
