Toni Branner is director of Fitness Concepts, a professional speaking and consulting firm in

Charlotte, NC, that provides seminars for professionals and the lay public on topics such as anti-aging, children's wellness, motivation for lifestyle change, whole food nutrition, stress management and safe exercise. Toni received her Master's Degree in Exercise Physiology from the University of North Carolina at Chapel Hill where she also served as director of the UNC Employee Health and Fitness Center and as a faculty member in the Department of Physical Education, Exercise and Sports Science. She is the proud mother of Jenna and Will, and the wife of Bill, who is a physician.

Toni Tickel Branner has three books out on the "Care & Feeding of ...". While there are differences in this book (the quotes and some non-soccer advice) a lot of the language is exactly the same. My first review was of her book for the soccer player. So, I don't think you need all three. Just pick the one that is most focused on what it is you do. Just as she has adapted her text, I have only slightly altered my review. We all know that exercising our bodies is good for us. We also know that real life is full of competition and there is winning and losing in all that we do. Athletics lets us exercise, have fun, and learn about competition when the stakes seem big, but are usually small. Organized sports consume more and more time in the life of many American children and young adults. As the author notes, "you learn to push yourself to your fullest potential, learn to take criticism as a compliment, and learn to gain confidence from each experience." The author takes a responsible approach to fitness, nutrition, and competing to enhance your child's life, not consume it. Besides her own experience as an exercise physiologist, she has a board of medical and exercise experts who, I assume, looked over this material. She also realizes that kids play sports differently and have different skill requirements according to age or grade level. Her advice for playing, learning skills, and warming up take all this in mind. I particularly like her discussion of common injury types and what you can do to prevent them. She also discusses the mental and emotional aspects of the game, including handling stress. Her food advice is quite good; if a bit too vegetarian for my tastes, but nothing here will be anything but good for you. She also deals with body image and distorted eating. The author also guides you through getting the most from sports camp, how to be good sideline parents, and what to think about to become a successful and happy sports family. She also has a chapter on life lessons that can be learned from sports. Good stuff. Reviewed by Craig Matteson, Ann Arbor, MI

Too many kids and parents are pushing themselves too hard on and off the field. Branner teaches kids and parents how to take care of the young athlete and make sure they are around and healthy

for those all important college years. Fantastic nutritional advice maximizes health and shows the importance of water, anti-oxidants and proper eating as a vital part of a young athletes road to collegiate or professional sports success.

While this book is a great resource for parents of young athletes, or young athletes themselves, I have found the recommendations on nutrition extremely helpful. The information in Branner's book persuaded me to make changes in my eating habits and I have more energy and feel better as a result. It's an easy read and full of good advice for anyone, not just athletes.
