The Interior Plan: Concepts And Exercises

Synopsis

This introductory-level text introduces students to the planning of interior environments, addressing both the contents of the environments and the process of interior space planning. Topics include the making of rooms, the design of effective spatial sequences, functional relationships among project parts, arrangement of furniture, planning effective circulation systems, making spaces accessible, and designing safe environments with efficient emergency egress systems. Exercises throughout the book facilitate learning by encouraging students to apply ideas and concepts immediately after reading about them. This second edition features logically re-organized content with coverage on accessibility and universal design throughout, providing for a more intuitive read. It also features new original artwork by the author and a new glossary for quick look-up of terms. Finally, there are new exercises that engage students and test their ability to apply what they have learned.

Roberto J. Rengel is a professor of interior design at the University of Wisconsin-Madison, USA.

Easy to read and understand, lots of illustrations of standard sizes and spacing, even has floor plans and illustrations of important works by Mies Van der Rohe, Josef Hoffmann, Inigo Jones, etc. Informal, sketchy, large illustrations and work-book assignments feel a little childish, but it makes it less intimidating for such a comprehensive text.

Thank you so much :-)

I love the text and illustrations. I just switched from "Space Planning Basics" to this book. All my lectures are based on this text

The basics of interior design space planning...explained beautifully. A must read for all interior designers. Highly recommend for anyone interested in understanding interior space planning.

I highly recommend this book if you're just starting to work with space planning, it really breaks it down step by step.
