Flora Of North America: North Of Mexico, Volume 25: Magnoliophyta: Commelinidae (in Part): Poaceae, Part 2

Synopsis

Volume 25 of Flora North America is one of two volumes on grasses to be published in this series. Together they will provide a comprehensive, authoritative, illustrated account of this important group of plants. Most of the species treated are either native to North America north of Mexico or are introduced species that are now established in the region, but there are many that do not fit into these categories. Among the additional species are several that the USDA has identified as major weed threats; and others that are known only as cultivated plants, some being cultivated for their ornamental value, others as sources for human food or animal forage. For instance, volume 25 includes such ecologically important species as Big and Little Bluestem, economically important species of Sorghum and Corn, ornamental species such as Job's Tears and Hakonechloa, and noxious weeds such as Itchgrass. The volume includes identification keys, descriptions, line drawings, and ecological characteristics for each of the species; distribution maps for the native and established species; and a list of the synonyms currently in use for the accepted names. The treatments, each of which has been extensively reviewed, are based on a combination of original observations and critical review of the literature.

Book Information

Series: Flora of North America

Hardcover: 814 pages

Publisher: Oxford University Press; 1 edition (July 17, 2003)

Language: English

ISBN-10: 0195167481

ISBN-13: 978-0195167481

Product Dimensions: 11.3 x 2 x 8.8 inches

Shipping Weight: 5.3 pounds (View shipping rates and policies)

Customer Reviews

"I could not put it down. ...excellent illustrations and taxonomic descriptions... In short, it is my new favorite book." --HortScience "...differ[s] from other incarnations of Flora of North America by

including not only natives, but agricultural crops, ornamentals, research taxa, waifs (introduced species that have failed to become established), and plants identified by USDA as threats to American agriculture (the project was partially funded by several federal agencies). Illustrated with large, clear line drawings and cited in Guide to Reference Books." --SciTech Book News

Mary Barkworth, Kathleen Capels, Sandy Long, and Michael Piep are all at Utah State University.
