Eric Conrad (CISSP, GIAC GSE, GPEN, GCIH, GCIA, GCFA, GAWN, GSEC, Security+), is a SANS-certified instructor and President of Backshore Communications, which provides information warfare, penetration testing, incident handling, and intrusion detection consulting services. Eric started his professional career in 1991 as a UNIX systems administrator for a small oceanographic

communications company. He gained information security experience in a variety of industries, including research, education, power, Internet, and healthcare, in positions ranging from systems programmer to security engineer to HIPAA security officer and ISSO. He has taught more than a thousand students in courses such as SANS Management 414: CISSP, Security 560: Network Penetration Testing and Ethical Hacking, Security 504: Hacker Techniques, and Exploits and Incident Handling. Eric graduated from the SANS Technology Institute with a Master of Science degree in Information Security Engineering.Seth Misenar (CISSP, GPEN, GCIH, GCIA, GCFA, GWAPT, GCWN, GSEC, MCSE, MCDBA), is a certified instructor with the SANS Institute and serves as lead consultant for Context Security, which is based in Jackson, Mississippi. His background includes security research, network and Web application penetration testing, vulnerability assessment, regulatory compliance, security architecture design, and general security consulting. Seth previously served as a physical and network security consultant for Fortune 100 companies and as the HIPAA and information security officer for a state government agency. He teaches a variety of courses for the SANS Institute, including Security Essentials, Web Application Penetration Testing, Hacker Techniques, and the CISSP course.Seth is pursuing a Master of Science degree in Information Security Engineering from the SANS Technology Institute and holds a Bachelor of Science degree from Millsaps College, Jackson, Mississippi.Joshua Feldman (CISSP), is currently employed by SAIC, Inc. He has been involved in the Department of Defense Information Systems Agency (DISA) Information Assurance Education, Training, and Awareness program since 2002, where he has contributed to a variety of DoD-wide Information Assurance and Cyber Security policies, specifically the 8500.2 and 8570 series. Joshua has taught more than a thousand DoD students through his "DoD IA Boot Camp" course. He is a subject matter expert for the Web-based DoD Information Assurance Awareness-yearly training of every DoD user is required as part of his or her security awareness curriculum. Also, he is a regular presenter and panel member at the annual Information Assurance Symposium hosted jointly by DISA and NSA. Before joining the support team at DoD/DISA, Joshua spent time as an IT security engineer at the Department of State's Bureau of Diplomatic Security. He got his start in the IT security field with NFR Security Software, a company that manufactures Intrusion Detection Systems. There, he worked as both a trainer and an engineer, implementing IDS technologies and instructing customers how in properly configuring them.

Another awesome book by Eric Conrad! Like the first reviewer, I'd also argue that this book by itself is not enough. Do not use this book to try to prep for the Practice Tests book tests. This book is not

detailed enough for the detail required to answer the domain chapter tests.This book, however, is still useful as a review/memory booster. When I did my last minute review questions before the exam, I had this book and Conrad's CISSP Study Guide 3rd edition within reach. Most chapters are short enough to read more than once. The only thing I would add to this book would be a full length practice test.

Passed on 5/3 in three hours. Don't waste your time with any other book. If you have the required five years experience to become a CISSP, this is the only resource you need. Everything is clearly laid out and written concisely to only give you the information you need. The book has several "Exam Alert" and "Crunch Time" modules that highlight certain areas you need to pay more attention to. At 200 pages you can't get a better bang for your buck. Study this for a week and sit for the test. You will be surprised.

Very easy to read and introduces content that is not found in other books. There are a few details in the book that are not to date and need to be updated like COBIT for instance. The authors should have made sure that these topics were properly updated for this revision.Personally, I would use this study guide as a secondary reference because the actual CISSP test focuses more on critical thinking rather than pure technical questions and, in my opinion, I find this book is more technical but still very useful. I'm very satisfied with purchasing this book and using it to study for the CISSP.

This book epitomizes the 80/20 rule, in that it covers 80% of the exam material in 20% of the [number of] pages of much larger CISSP review books. You will certainly want to utilize other books/resources, but this book is thin yet covers most of the key material. After you read this book, you should have a very good idea of where you stand regarding your readiness to sit for the CISSP.

After a couple of weeks reading through the Sybex book twice, I didn't really have any interest nor energy to read through this. I only got half way and to be honest I could've done without. It also explained things differently than the Sybex. My recommendation is to stick with one vendor/author. If anything, I think it's a good resource for a quick review on some of the key topics, but def not enough to get your through the exam.

This book can be read and comprehended by those prepping for the exam in a few hours at just over 200 pages. It is straight to the point and covers what's explicitly on the exam without adding

anything additional or useless.I've followed up the book with the practice exams in Shon Harris' and feel very confident to take the exam.In all, I would recommend this book as a great (although not the only) study guide.

After you've poured through everything and your head is ready to explode, this book boils it down to understandable concepts. It can't be used alone, but as the name implies, it is great for crunch time.

One of my favorite books to recommend to my CISSP students. Eric and his team do a great job of presenting a high level overview of the course objectives. Concise, easy to read and very informative.
