Mike Doyle is an internationally acclaimed LEGO artist and known for his stunningly realistic, grand-scale designs. His award-winning Abandoned House series has been showcased at

Gallery1988 in LA and Boston's Museum of Realist Art. His largest piece to date is Contact I, a 6-foot masterwork built from more than 200,000 LEGO elements. When not constructing LEGO art, Doyle works as a graphic designer. He lives with his wife and two children in New Jersey.

"Beautiful LEGO: Wild!" is a photobook of hundreds of really gorgeous and intricate LEGO builds, but my children and I were disappointed by the format and many of the choices. We were expecting a book with builds based on the book's stated theme of replicating the natural world, but a full half of the included builds are of fantasy worlds and popular characters: these odd choices include Grumpy Cat, the "peanut butter jelly" dancing banana, and many, many takes on JRR Tolkien's Middle Earth (by way of Peter Jackson's movies). A full chapter is dedicated to "artificial life," with photos of robotic-looking centipedes and the like. Interesting builds (even if many of them we've seen already on various LEGO blogs and websites), but not what we were looking for in a book themed as "Wild!" We were also disappointed that there is almost no text to accompany the photos. I know this is a coffee table-style book, but even the typical coffee table book offers some context! For serious builders like my eight year old, it's frustrating to flip through this book and find nothing on technique, nothing on construction. A couple of bigger names get short biographical notes, but that's it. Some of the editorial choices seemed odd, too, like including tiny, strangely cropped photos of big, intricate builds (requiring thousands of pieces) right next to huge photos of small, basic builds (with few pieces). Rather than try to cram in so many builds like a joyless inventory, why not fill some of that empty page space with close-ups to focus on nice details of the larger builds? Or why not include a few photos of the process of building, rather than just the finished products? All in all, I think this would be a much more satisfying book if fewer, on-theme builds were included, with more informational text on how the creators built their work. Perhaps some ideas for revisions for later editions?

So far I have built the canary and the last one. Some of the instruction details were hard to follow. Also I had to rework the legs on the canary to be more stable and not fall apart when looked at. My biggest wish is that there is a follow up book with larger more intricate birds that Mike Doyle is known for like the Toucan. I think the birds in the book are to similar but they do give you an understanding of how to build a somewhat realistic bird.

Description didn't specify they were photos only- no instructions included.
