The material is fine. However, this is EXACTLY the same as the blue Singapore Math Practice books. Every single question is the same.... it's the same book (combining the two separate 3A and 3B books). Unfortunately, I bought this book AND the blue books with the intention of using them together for additional work. Now I just have two copies of every problem. So, buy this book OR the blue Singapore Math Practice books, not both! They are all SAP Education books and the blue ones are published by Frank Schaffer Publications, while this reddish one is from Thinking Kids.

I have heard about Singapore Math. My kids go to Kumon for reading and math. Reading is great there but math is more like memorizing. When I ask them a subtraction and adding question, they still use their fingers to count it and figure out that way. I want them to not memorize but really understand the material and I think this does it. Although it's a little hard to teach them. They don't really give that many problems to try it out for them so it's hard for us parents as well.

I bought this book for my daughter to practice on And she is the love it

Great math book for teaching kids problem-based math.

Awesome

Enjoying some summer math review. This book is independent study as well as assisted study. Love it.

Very good for daily practice ..

Perfect for home support of student's learning.
